

Take digital photographs of components on the white board and download photographs into a computer

Increase the size of the images of the components by approximately 20% and awange enlarged images on an image of a backing board of the required size using computer

Apply bonding agent to one face of backing board and allow to air dry

Print shapes of the enlarged images on the same face of the backing board to which bonding agent was applied

Punch a pluvality of recesses into the same face of the backing board

Position components on their corresponding Shapes on the backing board and place the backing board on the vacuum packaging machine

Lower film over the components

Use vacuum packaging machine to seal the components between the film and the backing board by applying heat and suchon
